

## AIEA Auditor Onboarding - Task 1

(Auditors - Sameera Sudarshan Kashyap)

### Group expectations:

As part of the onboarding to AIEA lab, we read and accepted UCSC lab guiding principles which listed some of the practices that should be followed by the members like regularly monitoring e-mail and discord, communicating any leaves beforehand, and communicating respectfully in the group

### Joining Discord and teamspace access:

Joined the discord channel and requested access to Auditor namespace

### Profile addition to AIEA website

- After gaining access to the Github team, we cloned the repository using Github CLI
- Added name specific markdown and portrait folders.
- We setu hugo using brew to ensure seamless installation.
- However, on running hugo server in the repository, we ran into an error and had to incorporate a fix in `themes/authors.html` by adding the following line

Python

```
{{- if . }}
```

- This fixed the compilation and we were able to run it.
- Staged and committed only the markdown and profile image files
- Finally made a pull request to the upstream repository .

**Issue :** The local server does not yet show the newly added profile information, there is lack of clarity around how to make it show or if we are missing any steps.
